

 Victorian Healthcare Experience Survey

Williamstown Hospital

September 2016

About the Victorian Healthcare Experience Survey

The Victorian Healthcare Experience Survey (VHES) is a statewide survey of people's public healthcare experiences. The Ipsos Social Research Institute - an independent contractor - conducts the survey on behalf of the Victorian Department of Health and Human Services using questionnaires based on the internationally recognised work of the Picker Institute.

The VHES allows a wide range of people to provide feedback on their experiences and provides specialised questionnaires for:

- adult and child inpatients, including parents/guardians
- adult and child emergency department attendees, including parents/guardians.
- maternity consumers
- adult and child specialist clinic consumers

These questionnaires are distributed to a randomly selected group of eligible people from each health service in the month following the hospital discharge or the emergency department attendance.

For further information about the VHES please contact: vhes@dhhs.vic.gov.au

About this report

This report provides results for your campus or health service for all patient categories for which a sufficient sample size (n=42) was achieved in the period July - Sept 2016.

This PDF was generated on 05 02 2017.

Answers to frequently asked questions and further information about the project's methodology are available in the appendix of this report.

The diagram below describes how to interpret each chart

Williamstown Hospital

Williamstown Hospital is a member of Western Health health service (WES) and is within the Other Metro peer group (OTH).

The Other Metro peer group consists of the following campuses

Angliss Hospital
Sandringham Hospital
Healesville & District Hospital
Yarra Ranges Health
Werribee Mercy Hospital
Broadmeadows Health Service
Craigieburn Health Service
Rosebud Hospital
Moorabbin Hospital
Casey Hospital
Cranbourne Integrated Care Service
Williamstown Hospital
Sunbury Day Centre

Response rates

Adult Inpatient

185 questionnaires sent, 39 received. Response rate - 21%

Adult Emergency

312 questionnaires sent, 80 received. Response rate - 26%

Paediatric Emergency

278 questionnaires sent, 54 received. Response rate - 19%

0-7 138 sent, 28 rec'd 20%

8-15 140 sent, 26 rec'd 19%

Adult Specialist Clinics

Response rate unavailable.

Campus Wide Experience - Sept 2016

In July - Sept 2016, 89.22% of patients from Williamstown Hospital rated their overall hospital experience as either 'very good' or 'good'.

This is no significant change in the proportion rating their experience as either 'very good' or 'good' compared to July - Sept 2015, when this proportion was 90.92%.

Overall Experience and Key Aspects of Care

The VHES Adult inpatient questionnaire seeks to discover the experience of people, 16 and over, who have been admitted to one of 116 Victorian public hospitals. Potential respondents are randomly selected from people who were discharged from the health service in the preceding month.

This section features the overall experience question, and the three key aspects of care that were most likely to differentiate a positive overall experience from a negative overall experience for the adult inpatient category.

Key aspects of care questions are identified with a ★

Overall experience questions are identified with a 🌱

Analysis shows that if a campus providing adult inpatient services improves the care and treatment provided by nurses, teamwork between doctors and nurses and the discharge process, patients' overall experience is likely to improve.

🌱 76. Overall, how would you rate the care you received while in hospital? [View data](#)

Spotlight

Transitions index adult inpatient

The transitions index has been developed with the aim of improving processes relating to discharge planning. It incorporates the average of the positive scores for four adult inpatient questions relating to discharge. The index provides an overview of how hospitals, health services, peer groups and the state are performing in the discharge process.

The transitions index is shown below followed by the four questions that contribute to the index.

Adult Emergency - July 2016 - September 2016

Overall Experience and Key Aspects of Care

The VHES adult Emergency Department questionnaire seeks to discover the experience of people over 16 who have attended one of Victoria's 36 Emergency Departments but were not admitted to hospital. Potential respondents are randomly selected from people who were discharged from the ED in the preceding month.

This section features the overall experience question, and the three key aspects of care that were most likely to differentiate a positive overall experience from a negative overall experience for the adult emergency category.

Key aspects of care questions are identified with a

Overall experience questions are identified with a

Analysis shows that if a campus providing adult emergency services improves the care and treatment provided by nurses, has enough staff to care for patients and improves emotional support, patients' overall experience is likely to improve.

Spotlight

Transitions index adult emergency

The transitions index has been developed with the aim of improving the departure process from the emergency department. It incorporates the average of the positive scores for four adult emergency questions relating to leaving the emergency department. The index provides an overview of how hospitals, health services, peer groups and the state are performing in this process.

n represents the average n across questions within the Spotlight. [View data »](#)

Paediatric Emergency - July 2016 - September 2016

Overall Experience and Key Aspects of Care

The VHES paediatric Emergency Department questionnaire seeks to discover the experience of children under eight and their parents or carers at 36 Emergency Departments across Victoria. Potential respondents are randomly selected from children who were discharged from the ED in the preceding month and were not admitted to hospital. From January 2015 the experience of children between eight and 15 years and their parents or carers will also be captured in an additional questionnaire.

Key aspects of care questions are identified with a
Overall experience questions are identified with a

This section features the overall experience question, and the three key aspects of care that were most likely to differentiate a positive overall experience from a negative overall experience for the paediatric emergency category.

Key aspects of care questions are identified with a
Overall experience questions are identified with a

Analysis shows that if a campus providing paediatric emergency services improves the care and treatment provided by doctors and nurses and has enough staff to care for patients overall experience is likely to improve.

Spotlight

Transitions index paediatric emergency

The transitions index has been developed with the aim of improving the departure process from the emergency department. It incorporates the average of the positive scores for four paediatric emergency questions relating to leaving the emergency department. The index provides an overview of how hospitals, health services, peer groups and the state are performing in this process.

n represents the average n across questions within the Spotlight. [View data »](#)

Adult Specialist Clinics - July - Sept 2016

Overall Experience and Key Aspects of Care

The VHES Adult Specialist questionnaire seeks to discover the experience of people, 16 and over, who have had an experience at a specialist clinic. Potential respondents are randomly selected from people who had an appointment at a Specialist Clinic in the preceding month.

This section features the overall experience question, and the three key aspects of care that were most likely to differentiate a positive overall experience from a negative overall experience for the adult specialist category.

🌿 69. Overall, how would you rate the care you received at the clinic? [View data](#)

Adult Specialist Clinics - July - Sept 2016

Your Care And Treatment

This section covered the care and treatment the patient received at their specialist clinic appointment. Patients were asked whether the staff treating and examining them introduced themselves and their role, whether the doctor or health professionals ever talked about the them as if they weren't there, if enough information about their condition and treatment was given and if they were involved as much as they wanted to be in decisions about the treatment and care plan.

Patients were also asked if enough privacy was given when discussing the condition or treatment and when being examined or treated, whether staff had clean hands before examining the patient and whether different staff said different things about the care being received.

Those whose appointment was about a long term condition and/or symptoms they need ongoing care or treatment for were asked whether a healthcare professional asked them what was important in managing the condition/symptoms, whether the appointment helped the patient feel that they could better manage their condition/symptoms and whether permission was sought if any students accompanied any health professions during the treatment and examination. Patients who reported that they needed help in understanding English were asked if there was someone in the clinic that could interpret for them and whether information was given in their language.

34. Did the staff treating and examining you introduce themselves and their role? [View data](#)

⚠ Insufficient data for this period

Answers

YA - Yes, all of the staff introduced themselves **SO** - Some of the staff introduced themselves

82. Who completed this questionnaire?

⚠ Insufficient data for this period

Answers

TP - The patient **AP** - A parent / guardian on behalf of the patient who is a child. **SE** - Someone else on behalf of the patient

TP - The patient with help from someone else

Adult Specialist Clinics - July - Sept 2016

Other Comments

This section allowed the patients to suggest ways that they felt the specialist clinic could improve their care and services and to list the best and worst things about their visit to the specialist clinic.

83. Would could the specialist clinic do to improve the care and services it provides to better meet you needs?

⚠ Insufficient data for this period

Methodology

The Victorian Healthcare Experience Survey utilises a combination of a mail-out and online method, and is sent monthly to a sample of eligible patients who had a hospital or emergency department experience in the previous month.

Until November 2014, the survey was provided only in English. From December 2014, surveys were made available in 15 languages other than English for the Adult Inpatient and Adult Emergency categories, and in six languages for Paediatric and Maternity categories.

Sampling and data collection

The sample for each campus to be surveyed is provided to Ipsos monthly. Campuses are required to provide limited details (name, patient category, preferred language, date of birth, postal address and where possible, email address) for a defined number of randomly selected patients each month via a secure portal. These details are kept for six months to ensure that patients are not surveyed too frequently and then securely destroyed to preserve anonymity.

Patients for whom an email address is provided are then emailed a link to the online version of the questionnaire. If they do not complete the survey online within two business days, they are then posted a hard copy version of the questionnaire. Those patients for whom an email address is not provided are also posted a hard copy survey at this point. Patients who receive a survey in a language other than English will only have the option to complete this survey in hard copy.

Those who receive a mail-out survey are also given details to complete the survey online if they prefer, or to complete the hard copy version and return by reply paid envelope. All mail-out surveys are data entered, and the data is merged with online results. At this point, the unique patient identification is checked to ensure no patients have attempted to complete online and hard copy versions of the survey.

Weighting and significance testing

To ensure that data accurately represents the population of interest (the true population of patients at each campus), 'normalising factors' are applied to the data. Normalising factors are calculated based on the difference between the proportion of a certain type of respondent in the sample and the proportion of that type of respondent attending the health service. In essence, applying normalising factors to a dataset readjusts the achieved sample to resemble the population, removing any skew in the results. The calculation of proportional factors to normalise survey data is a standard research process.

A proportional weighting scheme is applied to the sample at each campus to bring it into line with each campus's true population. This is based on the average annual separation data for each campus in 2013. In addition, in presenting the campus wide data, each patient category is normalised according to what percentage of the campus's true population it represents.

While weighting is applied to make a sample more accurate, any data manipulation can introduce error. Ipsos accounts for this by using an effective error margin – a process that estimates the degree of error introduced into a sample by a weighting scheme and accounts for it in all statistical tests applied.

Reporting

Results for the survey are reported on a quarterly basis, three months following the completion of each quarter. Quarters are:

- **January to March stays** (referred to as 'M' in charts throughout the portal) – results made available at the beginning of the following June.
- **April to June stays** (referred to as 'J' in charts throughout the portal) – results made available at the beginning of the following September
- **July to September stays** (referred to as 'S' in charts throughout the portal) – results made available at the beginning of the following December
- **October to December stays** (referred to as 'D' in charts throughout the portal) – results made available at the beginning of the following March.

Results for each campus are published only if the campus achieves at least 42 survey returns to ensure the data is statistically robust. However, these campuses will still contribute to the peer group, health service and state average. Where a campus does not achieve 42 survey returns, the portal will state that there is insufficient data for this period.

However, campuses with only small numbers of completed questionnaires will have the opportunity to receive a rolling sample as the survey progresses. This means that results for multiple quarters will be merged to provide a sufficient sample size over a longer period.

Note that a sample size of 42 affords a maximum margin of error of +/- 15% at the 95% level of confidence. This means that if 70% of patients at campus with 42 survey completes rate their overall experience as 'very good' or 'good', we can be 95% confident that between 55% and 85% of all patients actually feel this way. As the sample size increases, the margin of error decreases. For example, if 70% of a sample of 150 patients rate their experience as 'very good' or 'good', we can be 95% confident that between 78% and 62% actually feel this way, as the maximum margin of error is +/- 8%.

Analysis

In all reporting, statistically relevant significant findings have been reported at the 95% confidence interval and are represented within tables in green where the subject (campus, health service or state) has performed significantly higher than the comparator or in orange where it has performed significantly lower.

In addition, a key driver analysis was run to determine the 'Key Aspects of Care' for each patient category. These Key Aspects of Care are the defining hospital experiences: those that are most likely to separate a patient who rated their overall experience as 'very good' or 'good', from those who rate it as 'poor' or 'very poor'.

Response rates

In the July - Sept 2016 period, the following statewide response rates were achieved for each patient category:

- **Adult Inpatient:** 7090 individuals, or 33% of those invited completed the survey
- **Adult Emergency:** 2503 individuals, or 20% of those invited completed the survey
- **Paediatric Inpatient:** 1275 individuals, or 20% of those invited completed the survey
- **Paediatric Emergency:** 1548 individuals, or 17% of those invited completed the survey
- **Maternity:** 1301 individuals, or 30% of those invited completed the survey
- **Paediatric Specialist Clinics:** No surveying was conducted during the July - Sept 2016 period
- **Adult Specialist Clinics:** No surveying was conducted during the July - Sept 2016 period

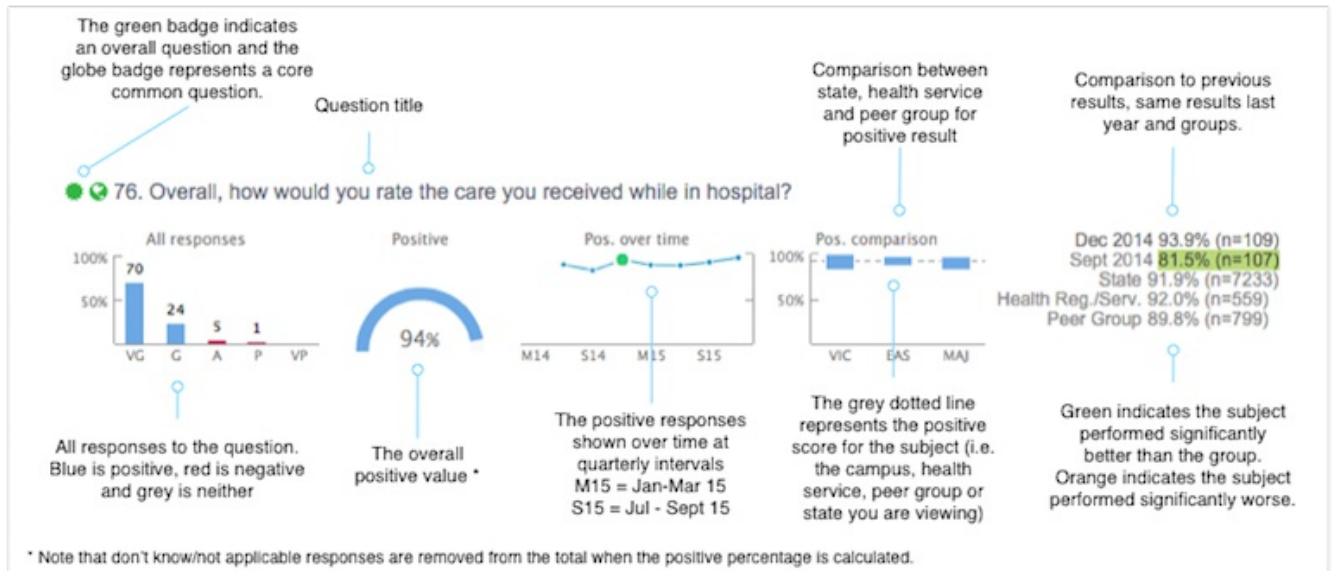

Help

Answers to frequently asked questions are presented below. If these do not respond to your query, please contact us at results@vhes.com.au

Frequently asked questions

Q: How do I interpret each question chart?

A: The images below provide detailed information on how to interpret and navigate charts and data.

Q: How frequently are results provided?

A: Results for the survey are reported on a quarterly basis, three months following the completion of each quarter. Quarters are:

- January to March stays (referred to as 'M' in charts throughout the portal) – results made available at the beginning of the following June
- April to June stays (referred to as 'J' in charts throughout the portal) – results made available at the beginning of the following September
- July to September stays (referred to as 'S' in charts throughout the portal) – results made available at the beginning of the following December
- October to December stays (referred to as 'D' in charts throughout the portal) – results made available at the beginning of the following March.

Q: Why can't I see results for certain patient categories for my campus?

A: Results for each campus are provided only if the campus achieves at least 42 survey returns to ensure the data is statistically robust (please see the Method section in Appendix 2 for more information on this). Where a campus does not achieve 42 survey returns, the portal will state that there is insufficient data for this period. Many health services experienced initial difficulties with data extraction and uploading. Most services have resolved these difficulties with and should expect results for all categories for the July- September results.

However, campuses with only small numbers of completed questionnaires will have the opportunity to receive a rolling sample as the survey progresses. This means that results for multiple quarters will be merged to provide a sufficient sample size over a longer period.

Q: What does the alert symbol ⚠ mean?

A: An alert symbol is shown where the sample size for a particular question is less than 30. This means that the margin of error for this question is quite large (more than +/- 18%), so results should be interpreted with caution.

Q: How can I see the patient comments?

A: Patient comments are analysed and presented at an aggregate level under the 'other comments' tab for each patient category. These comments are also provided, verbatim, to campuses.

The Victorian Healthcare Experience Survey operates under the Information Privacy Act 2000 (Vic) (IPA). The IPA requires Victorian State and local government agencies to collect and handle personal information in accordance with ten enforceable privacy principles.
