

When you are coming into hospital for breast surgery

Local excision of a breast lump

Please bring with you a well-fitted, supportive bra to wear once any bulky dressings are removed.

If your bra has an under-wire, it is advisable to remove the wire from the side you are having the surgery on.

You are advised to wear the bra to provide support and comfort to the affected breast after your surgery, once bulky dressings are removed.

The bra can be worn whilst any drain tubes are in place. When fitting the bra, just ensure that the tubing does not have any tight pressure or kinks to obstruct drainage.

If comfortable, the bra could also be worn at night, or alternatively a crop top can be worn, for comfort and support.
